

ANDY BOCHMANN

OBJECTIVE

As a seasoned .NET web developer with experience leading teams and managing complex projects, I am actively seeking a new career opportunity as a Solution Lead. I am eager to take on new challenges and expand my skillset while contributing to the success of the company. With my expertise in the field, I am confident in my ability to lead and inspire a team to deliver exceptional results.

KEY SKILLS & EXPERIENCE

11+ years' experience working in an agency environment with multiple clients
11+ years' experience in web application development using .NET, C#, and JavaScript
7+ years' experience in building, leading and mentoring a team of developers
7+ years' experience with modern JavaScript frameworks like Vue.js
7+ years' experience with Microsoft SQL Server, Git, GitLab, Azure DevOps, CI/CD
6+ years' experience with Microsoft Azure and other cloud providers
4+ years' experience in Kentico CMS, 2x Kentico Certified Developer and Certified Marketer
Enthusiastic about and able to quickly learn and adapt to new technologies
Strong aptitude for debugging and solving complex problems

WORK HISTORY

SENIOR SOFTWARE ARCHITECT / TECHNICAL LEAD, EETECH, PORTLAND, OR 11-2018 – PRESENT

I play a crucial role in developing and maintaining websites, e-commerce sites, and web applications for various clients in a fast-paced agency environment. Our development stack centers around .NET technologies, including C#, TypeScript, Vue, and Kentico CMS.

- Managing and leading a dedicated team of back-end and front-end developers
- Overseeing the entire technical development of our client's websites
- Mentoring and collaborating with junior and senior developers
- Providing guidance, regular code reviews and pair programming opportunities
- Establishing guidelines to guarantee code quality and consistency across various projects, such as naming conventions, code styling, and architectural rules
- Deciding and implementing software architecture (CQRS, Clean Architecture, Dependency Injection, Cross-Cutting Concerns, Functional programming)
- Build a custom Kentico foundation project that serves as the base for new projects
- Deeply involved in the planning, development, and maintenance phase
- Regularly collaborate with design, content, QA, and project management team to ensure seamless project delivery and timely issue resolution
- Work with various departments within the organization to effectively translate business needs into technical specifications

- Provide technical expertise, insights, and demos in direct customer meetings
- Build websites with over 14,000 pages and over 600,000 products
- Heavy focus on integration with numerous 3rd-part systems, a lot of them custom or legacy, like existing ERP, CRM, and PIM systems
- Integration of a custom Search product to be used in Kentico Smart Search
- Adapting Kentico to provide tailored E-Commerce solutions that align with the unique requirements of each client
- Configuration of CI/CD pipelines and code quality checks in Azure DevOps
- In charge of implementing hosting infrastructure of our clients

Some projects, that I was highly involved in include:

- Coilcraft and Coilcraft CPS website - <https://www.coilcraft.com/>
- IBS Electronics website - <https://www.ibselectronics.com/>
- Symmetry Electronics website - <https://www.symmetryelectronics.com/>
